DELTA CANDLES

A Visual Representation Of Delta

Orderflows Inner Circle Weekly Webinar #6 – Delta Candles

Delta Candles have been around for a while. They are offered on some order flow software. I used them for years but my programmer never coded them for me and recently he surprised me with it.

What delta candles do is give you a visual representation of delta in a candlestick format. Simply, it takes the delta numbers – Max Delta, Min Delta and Final Delta and plots it as a candlestick.

Takes this:

Delta	114	-42	114	-96	-278
Max. Delta	114	33	114	2	0
Min. Delta	-12	-42	-60	-101	-278

Let's face it, for some people, looking and trying to interpret a series of numbers is just too much work. The world is becoming visual, just look at the popular social media sites – Instagram and Pinterest. It is based on photos.

The mind can process a picture much quicker than a series of numbers or text.

How to use Delta Candles?

The same way you use traditional candlestick trading analysis – Look For Patterns.

I find candlesticks most powerful when the market is at extremes, highs or lows. Personally, for me, I have always had success with candles in spotting reversals. Candlesticks are able to accurately pick up on the changes in a trend which occur at the end of a short term swing in the market.

Now that you can visibly compare the other charting choices, let's look at some of the advantages of trading with Delta Candlesticks.

- Quickly see Max Delta and Min Delta and where Delta finished.
- One quick glance is all you need to see whether the buyers or sellers are in control.
- Each individual Delta Candle tells a story of investor sentiment, giving you an insight not only how to trade but when.

Know When The Net Selling Is Over

Orderflows Inner Circle Weekly Webinar #6 – Delta Candles

Why I appreciate Delta Candles? They work exactly the same in varying time periods and different markets. You are looking for the same patterns whether it be Corn, Bonds, ES, 6E, FDAX, Gilts on a 1-minute chart, 15-minute chart, 3 range chart, 10 range chart or renko chart.

Why is that important? Because you don't want to trade with something that is optimized to just one market.

To understand Delta Candles, you need to understand the information contained in the construction of the candle and the meaning behind the variations in the different Delta Candle patterns. But, don't worry, there are only about a dozen main signals. Once you are familiar with these major signals, the rest falls into place quite nicely.

Orderflows Inner Circle Weekly Webinar #6 – Delta Candles

There are 4 main components that build a Delta Candle.

1. The Beginning or the Opening Delta. When a new bar starts, the delta is zero. As the market trades the delta fluctuates between the Max Delta and the Min Delta.
2. Max Delta. The most positive delta a bar experienced.
3. Min Delta. The most negative delta a bar experienced.
4. The Closing Delta. The final delta number, either positive or negative in the bar when the bar finished trading.

An important subcomponent of Delta Candles are the wicks.

The thin lines above and below the real body are the wicks. The wicks are the part above or below the Delta Candle that indicates the extreme level of Max Delta and Min Delta. The wick above the body is called the upper wick and the wick below is called the lower wick. If there is no wick above the upper body, it is said to have a shaven head. If there is no wick below the lower body it is called a shaven bottom.

To Japanese candlestick traders the wicks are usually considered as extraneous price fluctuations, but to Delta Candle traders, they are a very important part of the analysis.

I make money trading mainly on reversals. When you think of reversals you tend to think of trend reversals, where the market makes a long move in a direction then ends and begins a new trend in the opposite direction.

To me a reversal sign indicates the trend we have been in is about to change, but not necessarily reverse in the opposite direction. You could go sideways first, then go either up or down. The markets don't always go up and down, you get sideways action a lot of times.

As with any traditional candlestick pattern, you must read and interpret the pattern in the context of the market. Delta Candles are no different. If you are looking at a reversal pattern, you need a move to reverse. Or if you are looking to buy would you rather do it at a low or after a move up? Would you rather sell after a move down? Or after a move up?

One of the main differences between Delta Candles and traditional candles is that traditional candles move up and down on a chart while Delta Candles trade above and below a zero line, almost like an oscillator.

Orderflows Inner Circle Weekly Webinar #6 – Delta Candles

Much of my analysis of Delta Candles centers around two patterns:
Shooting Star (Bearish)

Hammer (Bullish)

These two patterns form the basis of my trading with Delta Candles and the other patterns I look for tend to have one of those two patterns in them.

Orderflows Inner Circle Weekly Webinar #6 – Delta Candles

The Delta Shooting Star Pattern (Bearish)

It is characterized by an upper wick that is at least twice the length of the body with a small or no lower wick.

The longer the upper wick, the better the chance of a strong reversal.

The bar opens with strong aggressive buyers then delta changes and ends near zero.

The Delta Hammer Candle Pattern (Bullish)

Characterized by a lower wick that is at least twice the length of the real body with little or no upper wick.

The lower wick should be at least twice, preferably a lot more than 2x, the size of the body and there should be a very small or no upper wick.

A Delta Hammer represents a change in trader sentiment because at one point in the bar the candle was long and dark representing massive negative delta, however aggressive buyers came in and moved delta positive.

Generally speaking:

- Long lower wicks are indicative of a possible bullish movement.

- Long upper wicks are indicative of a possible bearish movement.

Orderflows Inner Circle Weekly Webinar #6 – Delta Candles

The bigger the wick, the more credible it is.

When the shadow is small it generally doesn't lead to any conclusions about the delta.

However if the wick is flat, shaven so to speak, it is important because the either buyers or sellers completely dominated the bar.

Orderflows Inner Circle Weekly Webinar #6 – Delta Candles

When you talk about traditional candle patterns, you look for them in downtrends or uptrends. Since Delta Candles, you don't have that movement since they are rotating around the zero line.

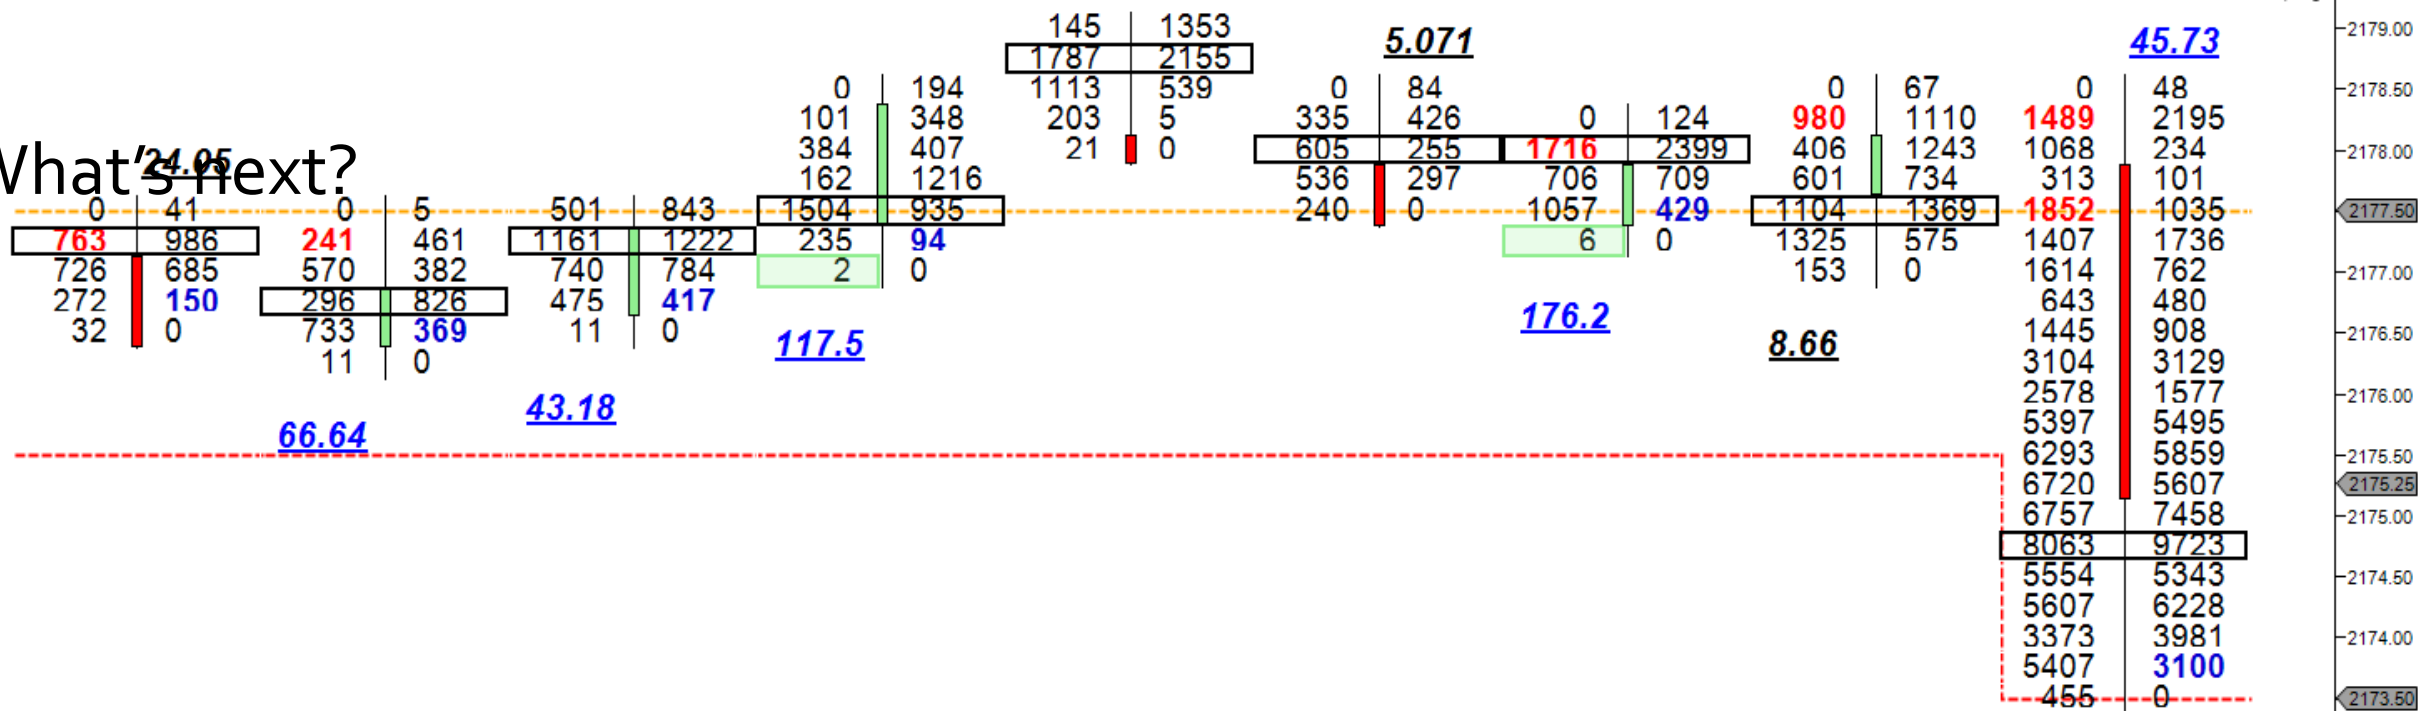

For example, a Shooting Star candle pattern should appear during an uptrend. With a Delta Candle, you don't have a trend in the delta, the candle just appear.

Delta Candles can make a difference in your trading. I admit though that it can seem daunting with different formations. But don't let that dissuade you from learning them and applying them in your trading.

I don't like to make things complicated, especially when it comes to trading. I have shared the patterns I have found useful in my own trading. You may discover your own pattern that you find useful.

Its not brain surgery, but does take some effort to learn the patterns.
