Chart Setting For Various Markets

November 2017

Here are my preferred settings for various markets. I don't cover every single market on the planet as most traders only trade a handful of markets.

Please don't take these settings as what it must be. Rather this is your starting point, it is up to you to refine them. You might want to make an adjustment on volume or the lookback period. It is up to you the trader to make the right decision.

There are traders currently using some of these setting as is. You have to take into account your own style of trading, how many trades you want and how much you want to risk on a trade.
